Sinamics CU320-2 wins Golden Mousetrap Award 2011

The Sinamics CU320-2 control unit from Siemens has won the renowned Golden Mousetrap Award 2011 from Design News Magazine, in the category of Automation and Control. This year, the jury – made up of editors from the magazine – selected a total of 95 finalists and 18 winners.

The winning product is noted for its high-performance. In many cases, with the CU320-2 control unit, multi-axis applications can be handled quickly, easily and more efficiently. Safety functions such as Safely Limited Speed (SLS) are possible in sensorless operation.

About Design News

The Design News Engineering Awards have been presented for more than 20 years, honoring good design and the engineers responsible for it. A US magazine, Design News features provides technology news, opinion, analysis, end-user examples and tutorials for engineers and engineering managers who design consumer and industry-specific products and systems that range in application from planes, trains and automobiles to mobile phones, industrial machinery, medical devices and more.
