

## SIPAPER Truck Tour in Italy

**The SIPAPER Truck dedicated to and equipped with all of Siemens solutions for the paper industry ends its tour through Italy – after a stop in Milan – in the region of Veneto.**

The truck, visiting Italy's most famous paper companies, is equipped to present the entire spectrum of the Siemens family of solutions dedicated to paper mills. They range from automation and drives, to the energy recovery and control systems, those for the aerobic and anaerobic water and finally those for waste recycling.

The idea behind the SIPAPER Truck project is to bring solutions directly to the customers, showing them the entire portfolio dedicated to paper and demonstrating the ability of Siemens Industry Solutions to answer all questions related to the life cycle of a mill.

"We want to use the SIPAPER Truck to reach our customers directly and show them the big range of potential uses of SIPAPER products," said Claudio Caponnetto, Head of Business Unit Paper of the Siemens Industry Solutions in Italy. "The Truck is, in fact, more than just trade show furniture, because not only does it show the technology and new trends, but also the many years of expertise developed by Siemens Industry Solutions in this branch, according to the slogan 'All that the paper industry needs.'"

The space inside the truck is divided into two sections with two different themes: Automation of production and environment and energy. Within each section there are

plant components such as high efficiency motors, automation systems based on SIMATIC technology SINAMICS, systems for treating water and wastewater and proposals for service and maintenance. The modules are organized so that different areas can be linked together and customers can via a display, be guided step by step in the discovery of different solutions. Moreover it offers an area for communication and space for further discussion and presentations.

Truck-Presentation at the Siemens headquarter in Milan

The SIPAPER family is a modular package of solutions developed specifically for companies in pulp and paper. With the help of several modules that cover all stages of

the life cycle of the plant, paper manufacturers can not only find solutions designed to increase the efficiency of their system, but also those to optimize the secondary processes. SIPAPER solutions have emerged to help the operator to increase plant availability, minimize unscheduled downtime and to ensure a consistently high level of product quality to reduce costs and improve economic efficiency. The high degree of standardization brought by the SIPAPER family also facilitates future expansions and upgrades whilst protecting the customer's investment.

After the truck visits the headquarters of Siemens in Milan, Bicocca on 11<sup>th</sup> and 12<sup>th</sup> November, it made its way to Lucca, Italy before moving to the Veneto and Friuli areas at the end of November.
